

Homeopathic treatment of COVID-19 / SARS-CoV-2

Filip DEGROOTE, M.D. – 01/05/2020 (with little extension/up-date on 01/07/2020)

<https://hpathy.com/journal/homeopathy-for-everyone-may-2020/>

Summary: In this article I want to explain a very successful approach, by analogy with the way I have treated flu the past twenty years, to treat the Covid-19 epidemic by the help of the application of the Energetic Examination (E.E.).

Since the outbreak of the epidemic I'm noticing a very high sensitivity in people (of about 70% till 100% some months later) related to the energy resonance of the Covid-19 virus. This is in sharp contrast with the built-up group immunity which, even after many weeks of the present epidemic, keeps staying very low (5%).

So the energetic virulence is extremely high and that's why the isopathic remedy is indicated in a very large number preventively and in all cases curatively!

This treatment of Covid-19 has to be built in the first place on the 'individual remedy' of the patient (supplemented by the ancestral/miasmatic correction mostly by administering Psorinum), verified by the E.E. Then, further application of the E.E. reveals in most of the cases the need of the isopathic nosode, which will help to accelerate a total healing during the first stages of the epidemic.

When confronted with a hospitalised patient in the last stage, a more clinical approach can be considered.

Introduction:

Coronaviruses:

Coronaviruses are a group of related RNA viruses that cause diseases in mammals and birds. In humans, coronaviruses cause respiratory tract infections that can range from mild to lethal. Mild illnesses include some cases of the common cold (which has other possible causes, predominantly rhinoviruses) especially in winter and early spring, while more lethal varieties can cause SARS, MERS and COVID-19.

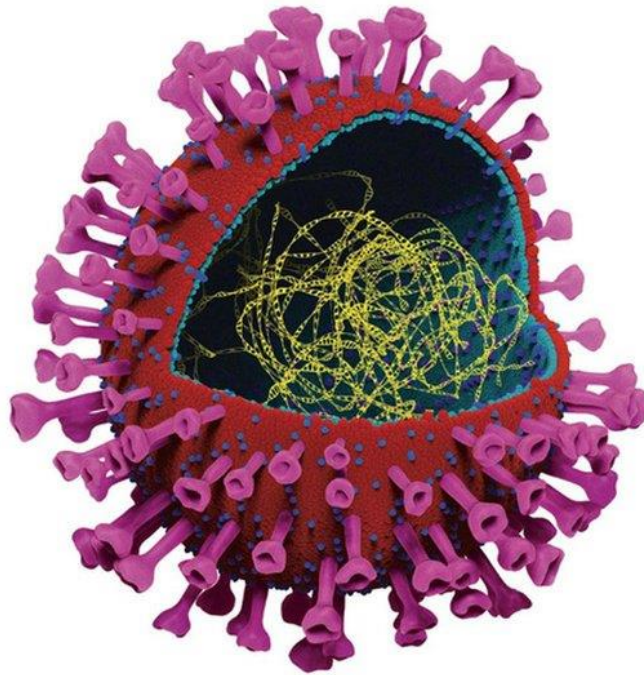

Symptoms in other species vary: in chickens, they cause an upper respiratory tract disease, while in cows and pigs they cause diarrhea.

Of the more than 30 strains of the coronavirus isolated in the laboratory, there are seven variants that can infect humans:

- [HCoV-229E](#)
- [HCoV-OC43](#)
- [SARS-CoV](#)
- [HCoV-NL63](#)
- [HKU1-nCoV](#)
- [MERS-CoV](#)
- [SARS-CoV-2](#) or Covid-19, also called *Wuhan-virus*, which caused in 2020 the Corona-panepidemic.

SARS, MERS and SARS-CoV-2 can cause lethal lung infections.

Covid-19 / SARS-CoV-2:

The genetic material of Covid-19 consists of a positive single stranded RNA. Covid-19 has barely 15 genes and 27 proteins, while humans have about 25,000 genes and 20,000 proteins. And yet the new coronavirus - a billionth of a meter in size - manages to bring our entire society to a halt.

Types:

- A-variant: Wuhan (China) – source: can bats -- USA
- B-variant: Asia (low virulence towards European people)
- C-variant: in Europe coming from Singapore, Hongkong and South Korea

High risk population :

- Eldery people (men more than women)
- Obesitas
- Metabolic syndrome, high glycemia, Diabetes type II
- People suffering from chronic diseases; having a poor or suppressed first line of immune defense, poor NK Cell activity
- Preexisting inflammation & oxidative stress
- Chronic immune related pathology, including cancer
- The drugs, angiotensin converting enzyme (ACE) inhibitors, angiotensin II type-I receptor blockers (ARBs), Thiazolidinediones (Avandia and Actos), Statines and Ibuprofen, appear to increase risk of these severe illness, risk of respiratory failure and death from COVID-19.
- Flu-vaccination (Zach Bush, M.D.)
- Air pollution (especially cyanide in the air)
- People having blood type A = risk is 20% higher (in contrast with blood type O which is much less sensitive).
- An elevated ferritine level seems having a link to the possibility of developing the 'cytokine release / storm syndrome'.
-

People with an imminent death risc who require immediate medical attention:

Source: Nature Machine Intelligence, 14 May 2020, doi:10.1038/s42256-020-0180-7

- o A high LDH concentration is critical in detecting the vast majority of patients who require immediate medical attention. (A high LDH level correlates with tissue and cell injuries: e.g. of the lungs - pneumonia.)
- o Lymphopenia (= reduced immune response)
- o A high hsCRP level (= persistent inflammatory condition)

The viral survival and contamination :

The infectious amount decreases by half after 3 hours. Researchers have reached this conclusion by determining the TCID₅₀ (Tissue Culture Infectious Dose), the dose that decreases a given concentration of target cells by 50% due to a cytopathogenic effect. Based on this, viability was estimated at 24 hours on cardboard and 2-3 days on plastic and stainless steel.

The Sars-CoV-2 could not longer be detected on printing paper and tissues after 3 hours and on wood and tissue after 2 days. The virus was detected the longest on smooth surfaces such as glass (4 days) and plastic and stainless steel (7 days). After 7 days, the virus could still be found on the outside of surgical masks (approximately 0.1% of the original inoculum).

Other studies suggest that the estimated median half-life of SARS-CoV-2 was approximately 5.6 hours on stainless steel and 6.8 hours on plastic. (Dr. van Doremalen, Mr. Bushmaker, and Mr. Morris; NEJM.org , March 17, 2020)

Last information: **The estimated viability on copper is 4 hours, 24 hours on cardboard, and 2 à 3 days on plastic and stainless steel.** The survival on clothing seems to be very limited. (Domus Medica, Belgium, 29/04/2020)

Some recent studies suggest that patients can continue to secrete SARS-CoV-2 virus up to 6 weeks after the first symptoms started.

The infectivity is the highest 1 day before the onset of symptoms.

Diagnosis :

RT- PCR-test

PARIS-score: based on the number of lymfocytes, eosinophilic, basophilic and neutrophilic granulocytes.

Variables	Points
Eosinophils < 0.06 G/L	1
Lymphocytes < 1.3 G/L	2
Neutrophils <5G/L	1
Basophils <0.04G/L	1
Score = 0-1 → Low probability	
Score= 2-3 → Intermediate probability	
Score ≥4 → High probability	

Table 3: Pre-test diagnostic probability of COVID-19 infection: PARIS score

PARIS score	Sensitivity	Specificity	PPV	NPV
1	1	0.22	0.74	1
2	1	0.49	0.81	0.98
3	0.91	0.67	0.86	0.77
4	0.80	0.85	0.92	0.66
5	0.37	0.97	0.96	0.40

Table 4: Performance in the validation cohort depending on the value of the PARIS score; PPV=Positive Predictive Value; NPV= Negative Predictive Value

SARS CoV-2 IgM and IgG antibodies test

CT-scan thorax

THE HOMEOPATHIC TREATMENT DURING THE DIFFERENT STAGES OF THE DISEASE

1. PREVENTION:

a. Administration of the individual remedy of the patient, if indications are present!

This makes the patient ready to defend him/herself.

b. ? Administering a preventive remedy?

Cf. Oxillococcinum or influenzinum in case of flu.

The preventive administration of such a nosode is not justified if not confirmed by Energetic Testing.

Moreover, by administering a wrong remedy the energy of the patient disrupts and weakens instead of strengthening.

2. ACUTE (curative) :

Symptoms and course of the disease:

I. Incubation time: Symptoms develop about 2 à 14 days after viral exposure.

The highest virulence is about 3 days before the first symptoms appear and the first days of the acute phase. During those first days, still before the onset of the first symptoms, the infection is already passed on through the normal contacts, so without being aware of it.

Only 10% of the patients tested positive develop flu symptoms, including fever, myalgia, ...

II. Mild symptoms (dry cough and fever).

(1.) At first it is like an ordinary flu. Fever (90%), dry cough (70%) and fatigue (40%). Rarely diarrhea, little myalgia, throatache and headache. = **'First stage'**.

In 30% one of the first symptoms is a loss of smell and taste!

(2.) After a week one often feels healed and even very fine during about 2 days. (! Feels well before going worse) = **'Second stage'**.

III. Possible evolution to a **'Third stage'**: dyspnoe / pneumonia / ARDS (acute respiratory distress syndrome or shocklung).

(3.) The dry cough persists and the patient becomes quickly short of breath, which requires admission to a hospital (IC unit).

It feels like there is a brick lying on the chest or a band around the chest, as if the lungs are no longer able to fill completely.

First one reports blue organ failure (by lack of oxygen) due to a pronounced hypoxemia (binding problem of oxygen to the **hemoglobin**). The patient has a blue skin however he has mostly no fever, can speak normally and has no accelerated breathing. Only then there is coming fluid into the lungs with signs of thrombosis of the arterioli. The hypoxemia causes multiorgan failure with a strong repercussion on the liver. Therapeutic ventilation under pressure makes it even worse because the oxygen is not bound to hemoglobin and so functions as an oxidant all over the body. – Zach Bush, M.D.

(Therapy has to consist of changing the shape of the hemoglobin protein so that it binds again the oxygen.)

Severe lung damage occurs in about 20% of patients admitted to hospital (ICU). This is attributed to an excessive production of cytokines, a hyper-immune response that can even lead to a cytokine storm syndrome.

On CT scan it is seen that the alveoli at the level of the **lung base** are filled with pus and fuse so that hepatization of the lung develops (frosted glass pneumonia).

Afterwards (after leaving the hospital), patients may remain contagious for approximately 14 days (or more) and therefore have to remain quarantined at home for another 2 weeks.

General rehabilitation (of muscles, heart and lungs) after intubation / ventilation is an average of 1 week or more per day of intubation, depending from the age of the patient,

The symptoms after the acute phase are very diverse, ranging from generalized muscle weakness post IZ - "intensive care unit acquired weakness" - but also critical illness neuropathy, myopathy, pronounced deconditioning and fatigue, and sometimes also psychological and cognitive dysfunction.

UNIQUE PLACE IN THE TREATMENT OF Covid-19 BY ISOPATHY:

Covid-19 remedy : radionic code rate = **894835**

Covid-19 nosode available from homeopathic companies:

- Gudjons pharmacy, Germany
It's called sputum. To order, order "Sputum" (as they can't name it Corona officially, too risky in public).
Friedrich-Merz-Straße 1, 86153 Augsburg, Duitsland - +49 821 4447888 ; labor@gudjons.com

- Farmacy Sollie (Antwerp) +3232374556 : made of the sputum of a Covid-19 positive woman.

1. **Energetic testing** reveals the following energetic imbalance:

Hypotony of the right m. supraspinatus little finger upward
Hypotony of the left m. latissimus dorsi
Hypotony of the left m. gluteus medius
Hypotony of the right m. soleus
Hypotony of the right m. quadriceps femoris

There is also a Therapy Localisation at the Acupuncture point Lung 2, left.

(With Eyes Closed there is a hypotony of the right m. latissimus dorsi)

2. The **prescription approach** is like I treat flu as well preventively as curatively:

See: www.filip.degrootte : Publications, 'Influenza and sycosis'

a. First the **individual remedy**, followed by (usually) Psorinum.

b. Then:

- Let the patient close the eyes for about 5 seconds. Then mostly, if the nosode is indicated the energetic picture will appear.
- In case it doesn't appear, then try a glabella tapping with eyes open (without winking). Then sometimes the energetic picture of Covid-19 at last appear.

So, if the nosode Covid-19 is then indicated, the muscle tests will appear!

Then of course administer the nosode.

(If you have a radionic machine to your disposition the current dose is mostly MK, with can be directly administered via the right thumb (= direct access to the lung meridian.)

NB: Do not blindly administer preventively this isopathic nosode !!

SCHEDULE OF THERAPY

Stage 1:

Cough, fever, pain in muscles and joints, coryza, loss of smell and taste, headache, nose obstruction, sinusitis, nausea, weakness, restless, anxiety, ..

- Suggested remedies in de literature: bry., gels. (= anti-flu remedies – Vithoukaskas), ant-ars., ant-t., ascl-t., eup-per., merc., phos., ph-ac., ...

- MY APPROACH:

First the **individual remedy of the patient** , based on peculiar symptoms and dreams originating from before the Covid-19 disease, followed by (usually) Psorinum, and then – mostly confirmed by the Energetic Examination – the isopathic Covid-19 nosode.

Stage 2: (INTERMEZZO) : the patient feels well

MY APPROACH:

First the **individual remedy of the patient** , based on peculiar symptoms and dreams originating from before the Covid-19 disease, followed by (usually) Psorinum, and then – mostly confirmed by the Energetic Examination – the isopathic Covid-19 nosode.

Stage 3:

Severe pneumonia, myocarditis, pericarditis, ...

... day 10: cytokine storm syndrome leading to ARDS and multiorgan failure.

Probably important symptoms to be taken into account:

‘Respiration, difficult, lying on abdomen amel.’

Only to find in the rubric: Generalities, Lying on abdomen amel.

(Also similar: Respiration: difficult, lying on back agg.; lying on back agg.)

Feels well before going worse

The following remedies, **mostly selected on clinical symptoms**, score the best: (acon.), ant-ars., ant-t., ars., ars-i., ascl-t., bell., bry., (calc-p.), chel., hep., iod., kali-c., kali-i., (lyc.), nit-ac., nux-v., ph-ac., phos., psor., stann., sulph. (californium, pyrogenium, radon, ...)

NB: Relation 'Acon. – Sulph.': I want to remind you of the relation between the acute remedy Aconitum and its chronic remedy Sulphur, in the way Kent reports:

Kent: Lesser Writings, page 506:

' A case of pneumonia that has reached to the stage of exudation and where the patient is in a state of mental anxiety. You find Aconitum to be indicated, but as sure as you give it you will fail. When I first commenced prescribing I gave Aconite and I never had anything but failure. Give Sulphur at once and you will cure the patient. I say in ninety-nine cases out of one hundred give Sulphur! '

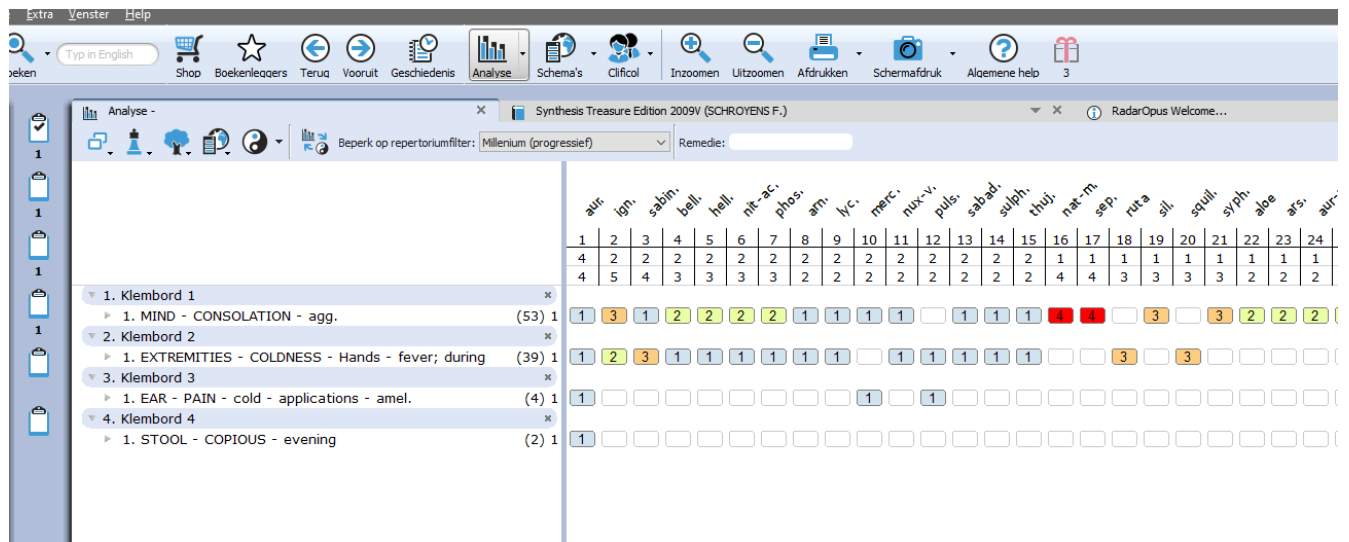

EXAMPLES (own cases with mild symptoms) :

1. A little boy of 15 months old has fever and cries violently, and even more when the mother tries to console him. On the other hand he calms while putting a cold hand on his left ear.

Clinical examination reveals a left otitis media and cold hands during fever.

A remarkable symptom to me was that the mother told me that he had during the last weeks in the evening frequent copious stools.

So, Aurum metallicum was found:

So I administered him Aur. (supplemented with Psorinum). Then after keeping his eyes closed during a few seconds the energetic picture of Covid-19 appeared and so Covid-19 MK could be administered.

The little boy recovered soon and is still OK!

2. A man of 72 years old, suffering from recurrent colds, came with a sudden upset of cough and dyspnoea. Also he had throatache on swallowing, as if grasped with a hand around the throat, impending him to breathe.

He also had several times a stitching pain at height of the left parasternal intercostal space.

He could tell me also two dreams:

In the first dream he and his wife were making a walk. At a certain place his wife notices acquaintances in a feast hall and wanted to greet them. While she entered he waited outside and was distracted by a silly jumping cat-like animal so that they missed each other and each of them returned home separately.

In another dream he notices that the waist belt a man wears is actually a snake!

Lachesis is the simillimum!

Symptoms and themes:

Throat, Constriction, as if grasped by a hand

Pain, 4° intercostal space, parasternal, left (= an energetic painful point – Pladys , A.)

Snake themes:

Dream, Splitted up (as result of being distracted)

Dreams, Waist belt is a snake

So I administered him Lachesis (supplemented with Psorinum). Then after keeping his eyes closed during a few seconds the energetic picture of Covid-19 appeared and so Covid-19 MK could be administered too.

He became soon better with disappearance of all the symptoms.

Note: Sources concerning the Energetic Examination (www.filipdegroote.be):

Physical Examination and Clinical Observations in Homeopathy, F. Degroote (1992 – revised and updated electronic edition 2014 - Radar Opus)

(WRONG) SEARCH FOR A GENUS EPIDEMICUS

- My conviction:

There is not 'one' genus epidemicus. This conclusion is in analogy with my experience of the yearly flu-epidemic I have already since more than 20 years.

The most important remedy during the first and second stage of the disease is the individual remedy of the patient which can act in 90% of the cases as well preventively as curatively, followed mostly by Psorinum (as ancestral correction)!

Then often the energetic indication to administer the isopathic Covid-19 remedy is found!

Since the outbreak of the Covid epidemic (March/April 2020) I found in about 70% of the cases 'with or without covid symptoms' that besides the individual remedy and the miasmatic nosode (mostly Psorinum) the Covid-19 isopathic nosode must be supplementary administered. The healing effect in all cases was complete!

Since the end of May I now find in 100% of all my patients (I mean also patients without covid symptoms) that the covid-19 isopathic nosode is required. The reason for this is that all people in my country had already contact with the virus but in most of them the threshold to get the disease was not attained. However the energetic sensitiveness is now there in all of them!

Further on, I guess that **during the third stage**, which is a very severe stage during which hospitalisation is mostly necessary, about ten % of the cases need supplementary an acute remedy or a remedy in relation with this severe pathology. (See below: Report from P. Debaets and J. Sherr)

Note:

- Take Thymuline (7 CH or a higher potentiation) into account in case of the Cytokine storm syndrom.
- Think also of cyanide remedies (e.g. Kali-cy.) to treat the hypoxemia.

To be followed afterwards, once better and when left that third stage, by a deep individual treatment – cf. stage 1 and 2.

- This third stage, which is a 'pathological' state, is the stage on which most of my fellow homeopaths now are focused to find one of the 'Covid-19 genus epidemicus' remedies, based on especially clinical symptoms.

Example:

Report from P. Debaets / J. Sherr (20/04/2020) concerning the treatment of Covid-19 and the search for a genus epidemicus:

- 1.
- 2.
3. **AMMONIUM CARBONICUM**
4. **PHOSPHORUS**
5. **BERYLLIUM METALLICUM**
6. **CUPRUM**

Nosodes, related

7. **TUBERCULINUM AVIS**
8. **YERSINIAE SERUM** (YERSINIA ENTEROCOLITICA)

Remedies related to classical drugs

9. **ANISUM STELLATUM** (related to Tamiflu®)
10. **CHINA** (cf. hydrochloroquine, an anti-malaria remedy)
